

# AI Usage Statement

Where AI helps, and how we keep humans in control

## Purpose of AI in this MVP

- Summarize long advisories into plain English context for small teams.
- Propose a preliminary priority using the Human Impact Index factors.
- Draft safe action checklists that humans confirm/trim.

## Human-in-the-Loop Controls

- Every AI output is reviewed; operators choose GO / HOLD / ESCALATE.
- AI cannot recommend 'unsafe actions' (e.g., one-click shutdown); content is filtered.
- Overrides and edits are logged for later QA and tuning.

## Data Handling & Safety

- AI operates on public advisories or operator-provided text; no PHI/PII is ingested.
- Known prompt-injection patterns are sanitized; sources are verified before summarization.
- We tag TLP and restrict sensitive text from public artifacts.

## Transparency to Reviewers

- This document and the Executive Summary disclose where AI was used.
- We include source attributions and confidence levels with each alert.
- We maintain examples of AI errors and human corrections for learning.
